*SureSmile Scanning
Appointment*

SureSmile Scanning Appointment

Congratulations.....

*You have reached a milestone in
your SureSmile treatment.*

The Sure smile scanner builds a 3-D model of your teeth and roots on the computer. The doctor will analyze the model to diagnose treatment issues and design your custom arch wires.

How does scanning work?

The scan procedure is the beginning of your SureSmile treatment. We use a white light-emitting scanner to scan your teeth. This advanced imaging technology allows us to better analyze the orientation and position of your teeth.

How long will this appointment take?

The scanning appointment is approximately 2 hours.

During the appointment Sure white a white paste will be applied to dry the surface of the teeth. The image of your teeth needs to be captured accurately with the scanner hence it is very important not to move during the scan. We will give you more instructions at the time of the scan.

In addition to your scan, we will need to take current records including photos and radiographs to record your treatment progress.

What happens next?

After taking your scan, we will send it to the SureSmile Digital Lab where individual tooth models will be made. Then the doctor will examine the 3-D model and determine the design needed for your SureSmile custom arch wires, which we will insert at your next appointment.

What is special about custom arch wires?

In traditional treatment, a patient receives standard wires that the doctor must bend by hand over multiple appointments to get the teeth perfectly aligned. With SureSmile, the orthodontist moves

models of your teeth on the computer into the best outcome for your teeth and bite. A set of wires are robotically bent hence custom-made for you.

What this means for you is:

- Less time in braces! The average reduction in treatment time is 40% (equivalent to 6-9 months)
- Fewer visits to the office
- Less discomfort due to advanced precision wires
- Fewer wire changes

Is there anything I should do while waiting for my wire insertion appointment?

Because the brackets and wires work together to move your teeth, please closely follow the instructions you received at the beginning of treatment to avoid accidentally damaging or knocking off your brackets. If you lose brackets after your scan, you may need to come back in for another scanning appointment. Not only is that inconvenient for you, but it delays your treatment.

Please contact the practice immediately if you have any concerns with your aligner.
